

## ***FROM THE DESK OF DR PHILLIPS .....***

***His own words on nutritional support***

**“Although the Neurological Integration System (NIS) developed by Neurolink stands alone and is NOT reliant on supplementation I believe with effective nutrient support, we can assist in further promoting and sustaining wellbeing.**

**I am conscious that you may have already investigated and chosen your nutritional support program. This must be done with care as many products today have compromised on integrity and quality in favour of cost-cutting.**

**In 31 years of practice, I have drawn my own conclusions about nutrition and would like to share these with you.**

I have selected the ***Oxygen Nutrition*** specialised line of pure botanical formulas as my only range of choice to recommend to my patients. Why? For the simple reason that these powerful formulas represent therapeutic modalities that work! Modalities that my patients know make a difference.

What makes these products different from any others is that each of the formulas contain a proprietary enzyme delivery system to ensure that the formula will enhance metabolic processing. This is truly unique to the ***Oxygen Nutrition*** range.

I understand how difficult it is for anything to be assimilated completely. Good ingredients within a nutritional supplement are one thing but whether your body is able to use those ingredients is another! Most supplements and vitamins fast track to the toilet because of their limited ability to breakdown to a point they can be utilised at cellular level. I have seen many scans of whole tablets in the small intestine!!

I am excited to be able to share and submit for your scrutiny a small specialised range of nutritional support that is ahead of its time. This development is attributed to the intimate understanding of cellular physiology by the biosynthesist Dr Tony Escobar. These are formulas that truly give results.”

**Allan K. Phillips, D.O.  
FOUNDER & DIRECTOR, NEUROLINK**
