

The Research of Dr Allan K Phillips D.O.

NEUROLINK® Centre Patient Update Issue #10

In this issue:

- Healthcare at the NeuroLink Centre
- What we do is scientific & accurately different
- Special Feature: Learning & behavioural difficulties at the NeuroLink Centre
- NeuroLink's Notice board
- In the spotlight: Awakening Do you lack energy & mental clarity?

NeuroLink Centre

Healthcare at the NeuroLink Centre®

- Do you suffer from broken sleep?
- Do you have digestion issues?
- Do you have irregular bowel motions?
- Are you constantly tired or fatigued?

Do you put off attending to your personal health, waiting until you are really unwell or in unbearable pain before you make an appointment?

You may think these things are normal for you. **NO** you should **NOT** have these complaints. If you answered yes to any of the above - you could be housing a subclinical infection.

What does that mean? It means your immune system is compromised or pre-occupied. A compromised immune system has you sitting in the 'danger zone' where your chances of developing chronic disease or illness is accentuated. Caring for your health can prevent serious consequences.

Here at the NeuroLink Centre we address the issues **behind** the symptoms that keep your system running 'below par'. Keeping your immune response at its optimum will exempt you from becoming a candidate for more serious complaints.

**Give yourself the opportunity to reach your full potential!
Make an appointment at the NeuroLink Centre today**

What we do is scientific & accurately different

- There are **4 reasons** you may wish to investigate that enable you to read this article, understand it, and decide what you may aspire to as a result
- There are **4 reasons** why your cells are potentially capable of restoring and repairing cellular mayhem
- There are **4 reasons** why you may have blood pressure, asthma or cancer
- There are **4 reasons** that you are alive

At the NeuroLink Centre we investigate these **4 reasons** from a functional viewpoint. This is the viewpoint ignored by medicine. If the prospective function of your body was thoroughly examined, your cellular intelligence would have a voice to speak.

Sadly that voice is suffocated by the suppressive symptomatic assessment you have received from medical sources that are negatively focused on your future. What are the positive and exciting features that you can recall about your last medical rendezvous other than a prescription to stifle your cellular intellect?

So many patients comment about the speed of the brain to enable major changes to occur. Your blood moves around your body completely every 21 seconds - makes 2.5 million red cells per second.

Have someone touch a hair on your head and you will feel it, and be able to account for the sensory smartness of one neuron or nerve fibre of your brain. *So what do you think the other 100 billion cells are doing in their eagerness to serve you?*

The Neurological integration System (NIS) the stand alone approach to healthcare management used at the NeuroLink Centre is the vehicle to reset disruptive signaling, responsible for the 4 issues of life.

1. **Physiology:** what is preventing the normal function of how living cells function?
2. **Neurology:** what is averting the dialogue between the brain and the cells?
3. **Immunology:** what is blocking the fundamental pathways that control infection?
4. **Emotional stress:** why signals and glands are affected by it.

Are the 4 issues of life working potentially for you?

Special Feature Learning & behavioural difficulties at the NeuroLink Centre

ADD / ADHD / Dyslexia / Dyspraxia / Hyperactivity / Aspergers

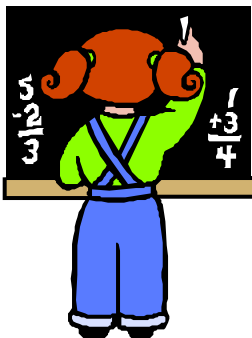

Investigation into learning & behavioural difficulties is the very area Dr Phillips' research first began. Learning & behavioural difficulties are expressed by a range of labels: ADD, ADHD, dyslexia, dyspraxia, Aspergers syndrome and increasingly—autism, affecting not only children but some adults also.

The key areas are: Learning difficulties (reading, writing, spelling and mathematics), Speech (stuttering), Recall - short-term memory, Co-ordination with sport/physical activities, Behavioural (anger & frustration), Emotional (lack of confidence, low self-esteem).

Regardless of the combination of symptoms – as far as current research indicates they are represented by the one banner of **"Neurological disorganisation"**.

There are many types of treatments available that others use—these are assistance and/or educational programs. They help the person to COMPENSATE for the patients deficit. Compensation is stressful and tiresome.

At the NeuroLink Centre we use a form of treatment to **reset** neurological pathways to allow automatic function to be restored. The *brain* will initiate change—not the patient.

Other methods work on the basis of **stimulating** the brain or doing something active to the body to effect change. Some programs work on the basis of minimising cerebellar developmental delay. They claim the cerebellum is the physiological cause of the learning difficulties. Some of these programs will often claim that if the connectors between the thinking brain (cerebrum) and the cerebellum aren't fully developed the

cerebellum can't process information quickly enough. Their exercises are then designed to stimulate the cerebellum and create new neural pathways.

What we do that is different?

The NeuroLink Centre addresses the neurological disorganisation so the symptoms will in time resolve. We do not see the neural pathways as impaired nor the cerebellum itself as a problem. What is not happening in the neurologically disorganised person is that the cerebellum is not congruent (or in appropriate dialogue) with all the other cortical centres. The cerebellum is only one area considered through treatment at the NeuroLink Centre. Other areas are: Limbic Brain, Auditory Cortex, Association Cortex, Motor Cortex, Pre-motor, Sensory Cortex, Visual Cortex, Gait Patterns. Why? Because.....you need to be able to write, visualise what you are writing and listen all at the same time. Other treatment methods do not take this into consideration.

If you have a family member with learning or behavioural difficulties, please phone the NeuroLink Centre. We are here to help you!

NeuroLink Centre Notice board

Patient Information Evenings

- Do you have family and friends that would benefit from care at the NeuroLink Centre?
- Do you have trouble explaining what we do?

Join us for 1 hour and we will give you an opportunity to learn more about what we do, and what makes treatment here at the NeuroLink Centre different to all other healthcare methods.

Learn how looking at causes and not symptoms can result in LONG TERM WELLNESS!

There is **no charge** to attend, but bookings are essential! Please phone reception on 09 522 2277 xtn:0 to find out about our next scheduled evening.

In the Spotlight: Awakening Do you lack energy & mental clarity?

Awakening was originally formulated for the American Olympic team to provide oxygen recovery for the athletes. Awakening works improving oxygenation to the red blood cells, maintaining normal blood sugar levels.

Awakening is a potent formula of synergistically blended herbs that provide daily nutritional support, promote energy, endurance and mental clarity.

This formula is all natural and ephedra free, encapsulated in vegetable capsules, suitable for vegetarians.

Awakening contains a unique proprietary blend of 7 plant based enzymes. These enzymes assure that nutrients are absorbed by the body through increased assimilation and help to speed up chemical reactions in the body.

Because most of the foods we eat are cooked, naturally occurring enzymes in the food are destroyed by heat, leaving people enzyme deficient.

There are no fillers or binders in this product and the herbs are concentrated, potency guaranteed, free of yeast, colourings, preservatives, solvents and starch.

Health benefits include: Energy; Endurance; Mental Clarity; Reducing PMS & menstrual cramping, Sexual Performance.

**Order on-line today & receive a 10% discount!
